(Tarter products are sold through Authorized Retailers Only.)

INTRODUCTION

Tarter's Galvanized Dog Kennel features high quality construction and delivers peace of mind for canine or small animal owners. It can be easily assembled and transported in a matter of minutes.

TOOLS REQUIRED

- 9/16" socket and wrench
- Tin Snip

STEP ONE

Each panel comes with two clamps already in place. Before assembly, take the clamps off. They go back on when you stand the panels up and bring the panel tubes together. There is a place cut out of the wire on each panel showing where clamps go.

STEP TWO

Lay panels on level ground. Beginning at a corner, stand the back panel and a side panel up, adjacent with each other. A second person is helpful in this process.

STEP THREE

With clamps provided, fasten the two panels together as noted in Step One. The only tool needed is a 9/16" socket and wrench.

STEP FOUR

With the first two panels in place, raise the third panel and clamp it in place. Do the same with the fourth panel. Assembly is now complete.

COMPLETE

You have now successfully assembled your Galvanized Dog Kennel and it is ready for use. For more information and questions, please contact: Tarter Customer Service 1-800-RED-GATE (1-800-733-4283).
